Who can see what

Institute Collaborator Portal · Visibility architecture for approval · Waga C, Pronto Digital · September 2026

Printed from the same declarations the Portal enforces, so this table and the live behavior cannot drift apart. Please read it as the policy you are approving.

Four audiences, from most protected to least. A collaborator may always choose to show less than the Institute permits, and never more.

- **The Institute only**
- **The collaborator and the Institute**
- **Admitted collaborators**
- **Anyone on the web**

Nothing is placed in the fourth. It exists so that if the Institute ever decides something should be visible on the open web, that is a setting rather than a rebuild.

The Institute only

Information	Who decides	Why this limit
City	The Institute	Collected as administrative, and said to be so at the time.
State or region	The Institute	Collected as administrative, and said to be so at the time.
Password	The Institute	Stored only as an irreversible hash and never displayed to anybody.
Two-factor secret	The Institute	A security credential, never shown.
How they came to the Institute	The Institute	Provenance is the Institute's record, not a public fact.
Who recommended them	The Institute	Named to the invited person by the Institute if it chooses, never published.
The referrer's relationship to them	The Institute	A private statement by one person about another; seen by the Institute alone, permanently.

How the referrer knows them	The Institute	Given in confidence to inform a decision.
Why they applied	The Institute	Written for the admission decision, not for publication.
Review decisions and reasoning	The Institute	The Institute's own judgments.

The collaborator and the Institute

Information	Who decides	Why this limit
Email address	The Institute	The Portal carries messages rather than displaying addresses. An address never displayed cannot be harvested.
Consent record	The Institute	Theirs to see, and the Institute's to evidence.
Terms they proposed	The Institute	Visible to them while awaiting review, and published only once approved.

Admitted collaborators

Information	Who decides	Why this limit
First name	The Institute	A collaborator is known to the community by name.
Middle name	The Institute	Part of the name of record where a person gives one.
Family name	The Institute	A collaborator is known to the community by name.
Generational suffix	The Institute	Part of the name, held apart so sorting stays correct.
Preferred name	The Institute	Given in answer to how the Portal should address them.
Credentials after the name	The Institute sets the limit; the collaborator may show less	Chosen for display; the collaborator may show none.
Professional title	The Institute	The heart of a directory entry.

One-line summary	The Institute	Written for other collaborators to read.
About your work	The Institute sets the limit; the collaborator may show less	Written for the community; the collaborator may leave it blank.
Organization	The Institute	Professional affiliation is part of standing.
Current positions, up to three	The Institute	Senior people hold more than one appointment.
Fields	The Institute	The directory exists so that people can be found by these.
Specialties	The Institute	Optional precision, offered for discovery.
Links	The Institute sets the limit; the collaborator may show less	The collaborator chooses which to add and in what order.
Photograph	The Institute sets the limit; the collaborator may show less	The collaborator may choose not to publish one.
Languages	The Institute sets the limit; the collaborator may show less	Offered to help collaborators speak to one another.
Open to collaboration	The Institute sets the limit; the collaborator may show less	Entirely the collaborator's own decision.
Country	The Institute	Collected as part of the directory and searchable by it.

Anyone on the web

Nothing. *Deliberately*.

What this guarantees

- A field nobody has declared belongs to the Institute alone, and the test suite refuses to pass until somebody states an intention. The Portal's mistakes err toward privacy.
- Every ceiling traces back to the promise made when the information was collected. A field is never later shown more widely than the person was told when they gave it.
- Enforcement happens in one place rather than page by page, so no future screen can get this wrong by forgetting.
